

SWAY FLOW

Discover our elegant collection of solid wooden lighting bollards, designed to elevate any space. Each unit is fitted with a low-voltage, energy-efficient LED lamp, making it ideal for a wide range of applications—from car parks and driveways to pathways, commercial areas, and even coastal settings.

This model features a distinctive domed top and a continuous band of ultra-bright LED strip lighting that follows the contour of the bollard, creating a truly unique and eye-catching design.

With its bold proportions, this lighting bollard is built to stand out and deliver reliable performance for years. Crafted from recyclable and biodegradable materials, it reflects our belief that beautiful design shouldn't leave a lasting environmental impact.

To help you enjoy its natural beauty from the start, we apply a coat of a natural oils before it leaves our workshop. This highlights the rich grain and vibrant tones of the wood, preserving its charm over time.

Each bollard is milled from sustainably sourced “green” timber, which will naturally crack, twist, and warp over time. This is a normal part of the aging process and adds unique character—no two are ever the same.

Features & Benefits

- Durable Materials & construction
- Available in Oak & Larch – other timbers on request
- 240v LED driver installed as standard
- High efficiency LED strip
- Easy to install
- Low maintenance
- Sustainably sourced timbers

Optional Extras

- Dusk to dawn sensor
- PIR sensors
- WIFI remote control
