

EV CHARGING

Introducing Iconium's Latest Innovation: The EV Charging Bollard

EV charging, made beautifully accessible.

By merging cutting-edge eco technology with timeless wooden bollards, we've created a solution that reduces both visual and environmental impact—especially in sensitive landscapes where harmony matters most.

Rather than dominating the space, our design is intended to blend seamlessly into its surroundings, offering a respectful presence that complements nature.

With its generous proportions, the Stratton Double commands attention without overwhelming. Built to last, it delivers reliable performance year after year. Every component is crafted from recyclable or naturally biodegradable materials, reflecting our commitment to sustainable design that doesn't leave a lasting footprint.

To help you enjoy its natural beauty from the start, we apply a coat of a natural oils before it leaves our workshop. This highlights the rich grain and vibrant tones of the wood, preserving its charm over time.

Each bollard is milled from responsibly harvested “green” timber. As it ages, expect natural cracking, twisting, and warping—subtle changes that add character and ensure no two pieces are ever alike.

Simply dig a hole, secure the bollard using your preferred concrete mix, and connect the power via a waterproof electrical connector (not included).

Please note: all electrical work must be completed by a qualified electrician.

Features & Benefits

- Durable Materials & construction
- 7.5kw & 22kw options
- Illuminated & non illuminated bollards
- Available in Oak & Larch – other timbers on request
- Easy to install
- Low maintenance
- Sustainably sourced timbers
- Available in Oak and Larch
